## VERMEND FLEXIBLE TRENCH DUCT PIPE

The new, flexible Trench Duct pipe from Vermend secures a stable and precise Trench Cut in all types of sewage, cable and pipe penetrations.

Previous methods in the casting of foundations often resulted in extra work, increased costs and frustration.

The development of the new Trench Duct pipe facilitates the workflow and makes Sure that the Trench Duct pipe, even after the laying of the foundation, is located precisely at the designated location.

# Vermend

## SIMPLE AND ACCURATE

**This innovative system ensures greater flexibility by allowing the Trench Duct Pipe to unscrew until the jagged pipe ends is screwed into the walls of the excavation. The Trench Duct pipe is firmly fixed during and after the laying of the Foundation.**

**The Trench Duct pipe is flexible and can, depending on the width of the excavation, be unscrewed to lengths between 260 mm and 600 mm.**

**The inner diameter of 140 mm allows a stable Trench cut for all types of wastewater, cable and other pipe penetrations.**

**The Trench Duct pipe is placed in the intended position in the excavation groove. The tube is then unthreaded until it is firmly seated in the walls of the excavation.**

**The Trench Duct pipe now sits firmly in the casting of the foundation.**
